Settled Asbestos Dust Sampling and Analysis

Settled Asbestos Dust Sampling and Analysis compiles the most significant data on asbestos in settled dust. This ready reference presents an analysis of settled dusts and surface particles of all sizes for asbestos, which are useful for qualitative and quantitative assessment and may help determine the source of the fibers. The main scope of this reference includes sample collection, sample analyses, and interpretation of settled dust data, and the use of such data for purposes including asbestos abatement projects and in-place management programs. Sections on lead and other particulates are also included.
